

HASBI NABIL DAFFA

Sukabumi | [WhatsApp](#) | hasbinabil.work@gmail.com | [Portfolio Website](#)

SUMMARY

Full Stack Developer with 3 years of experience in both corporate and freelance roles. Highly specialized in using Laravel and Vue.js, with additional proficiency in CodeIgniter and Next.js. A proven fast learner, adept at quickly mastering new technology stacks to meet project demands.

EXPERIENCES

PT Lab Computer Indonesia

Sukabumi, ID

Full Stack Developer – Hybrid

Sep 2023 – Feb 2026

- Developed a custom Content Management System (CMS) with an administrative dashboard and public blog platform, including dynamic sections, banner management, article publishing workflow, social sharing, and SEO configuration. The platform improved search visibility and increased organic traffic and reader engagement.
- Contributed to the early development of a restaurant Point of Sale (POS) system by implementing secure cashier authentication and designing an efficient table selection workflow, improving transaction accuracy and operational flow.
- Developed an integrated all-in-one F&B POS system deployed across 14 active outlets, covering transaction processing, multi-point receipt printing, master data management, inventory control, stock movement tracking, and real-time stock monitoring, enhancing operational efficiency and scalability.
- Contributed to the development of a Hospital Management Information System (SIMRS), implementing structured master data and outpatient workflows from patient registration to diagnosis documentation, streamlining clinical administration and improving data consistency.
- Developed scalable web applications using CodeIgniter and Laravel with JavaScript for interactive frontend features, maintaining clean, maintainable, and business-aligned system architecture.
- Worked in a hybrid environment, balancing remote development with on-site strategic meetings and urgent deployment cycles to ensure timely and stable delivery.

Entercode Technology

Gorontalo, ID

Full Stack Developer (Contract) – Remote

Apr – May 2025

- Developed a lightweight ISP management system, delivering core features within a one-month remote contract timeline. Implemented Laravel Repository Pattern to improve code structure, maintainability, and reusability across the application.
- Built end-to-end features including master data management, branch-based data filtering, and interactive workflows using AJAX, aligned with business requirements.
- Integrated third-party services such as Google Maps API for automated location mapping and coordinate synchronization, and Twilio WhatsApp API for real-time notification features.

PT Lab Computer Indonesia

Sukabumi, ID

Junior Full Stack Developer – On Site

Feb – Aug 2023

- Assisted in designing and reviewing Entity Relationship Diagrams (ERD) to ensure well-structured and scalable database architecture.
- Supported feature planning by contributing to workflow design, business logic mapping, and technical breakdown discussions.
- Contributed to the development of core application features, including CRUD operations for master data modules.
- Utilized Git for version control to manage code changes, maintain clean commit history, and support collaborative development.
- Collaborated with cross-functional team members through GitHub for pull requests, code reviews, and issue tracking.

PROJECTS

AKK (Aplikasi Keringanan Kredit) – Web & Mobile App

Nov – Dec 2024

Built a REST API-based credit management system using Laravel 11 with JWT authentication and multi-level access control, supporting both web (SPA) and mobile platforms via Android WebView (Kotlin). The application streamlined credit calculations, payment rescheduling, and transaction workflows, improving cross-platform accessibility and operational efficiency.

SIMPAN UMKM – Web App

May – Aug 2024

Developed a centralized SME registration and profiling system for DISKUMINDAG Sukabumi using Laravel, featuring multi-level access control, approval workflows, CMS capabilities, and Excel export functionality. The platform streamlined data management, accelerated verification processes, and improved coordination in managing local SME information.

VisCOK – Web App

Oct 2023 – Jan 2024

Developed a government expenditure management system using CodeIgniter, enabling structured submission, approval workflows, and role-based data access. The application increased transparency and operational efficiency in financial administration processes.

EDUCATION

MUHAMMADIYAH UNIVERSITY OF SUKABUMI

Bachelor of Computer Science, Major in Informatic Engineering – Cumulative GPA: 3.30/4.00.

Sukabumi, ID

Jan 2023
